

Prep, paint, set: rub test log

Name: _____

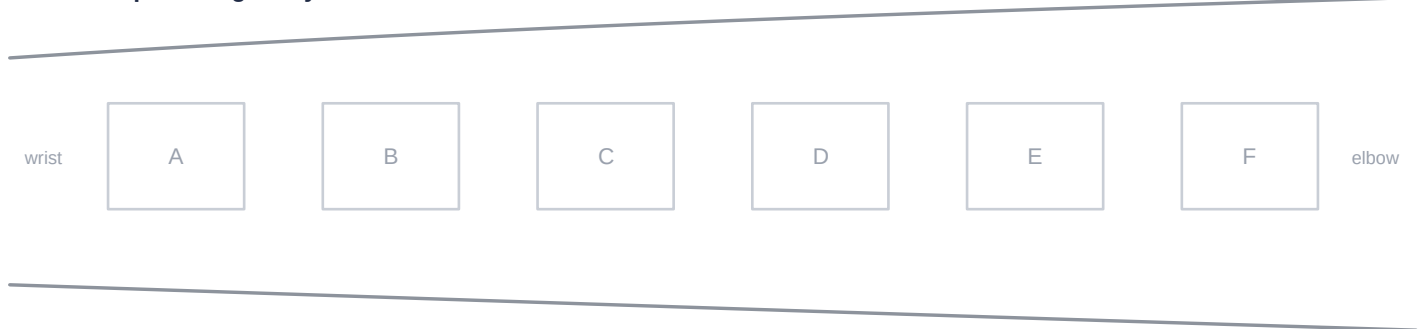

Paint the same small stripe on each forearm patch with a different prep or set, then do the rub test. Lesson 05.2.

Patch	Skin prep	Set with	Wait	Tissue after rub	Edges after rub	Notes
A	nothing (control)	nothing	10 min	clean / some / lots	sharp / smudged	
B	clean + moisturizer, dry	nothing	10 min	clean / some / lots	sharp / smudged	
C	clean + moisturizer, dry	powder	10 min	clean / some / lots	sharp / smudged	
D	clean + moisturizer, dry	setting spray	10 min	clean / some / lots	sharp / smudged	
E	cream, still wet (watch!)	nothing	10 min	clean / some / lots	sharp / smudged	
F			10 min	clean / some / lots	sharp / smudged	

The rub test

1. Paint the patch and let it dry until it is no longer shiny.
2. Set it (or not), as the row says. Wait 10 minutes.
3. Press a clean tissue on the patch for 3 seconds. Look at the tissue.
4. Rub the patch gently with a fingertip, 5 times. Look at the edges.
5. Optional: blow warm breath on it or hold a damp cloth near it for a minute, then repeat.

Where the patches go on your forearm

Must measure 10 cm. If not, print at 100% ("Actual size").
